

# What is data ?

Any information is called a data ex- number, text, word, audio, video or any file .

---

## How to get any output (result) in JavaScript

### ❖ **window.alert()**

- If you want to display your result in a dialog box (Popup box) so you have to use window.alert() method .

### ❖ **document.write()**

- If you want to display your result in your webpage without using any html tag so you have to use document.write() method.

### ❖ **console.log()**

- If you want to display your result in the console window of your browser so you have to use console.log() method.

### ❖ **innerHTML**

- If you want to display your result with the help of html tag in your webpage so you have to use innerHTML method.
- 

## Let's Create A Basic Program

1. Write a program to print "Your Name" a dialog box.

```
<body>
<script>
Window.alert("Mo. Sarfraj Shaikh");
</script>
</body>
```

---
